Additional Information
The Cover Crop Chart represents a compendium of information from multiple sources in the U.S. and Canada. Primary sources of information included the Midwest Cover Crops Council, USDA-SARE, USDA-NRCS PLANTS database, and relevant peer-reviewed journal articles. Designation of warm/cool season crops is based on prevalent growth habits and not photosynthetic pathway. Ranges for seeding depth take into consideration moisture conditions at planting and variation in soil texture. Values for crude protein and C:N ratio assume homogenous samples of aboveground plant material unless stated otherwise. Information on specific crops is occasionally generalized, approximate, and/or incomplete and may not reflect performance in on-farm conditions. USDA-ARS makes no guarantee to the performance of specific crops based on information provided herein. Content and data for crops were assembled by Holly Johnson and Mark Liebig with input from Dave Archer, Heather Dose, Wayne Duckwitz, Marvin Hatzenbuhler, John Hendrickson, Naeem Kalwar, Robert Kolberg, Nancy Jensen, Steve Merrill, Kristine Nichols, Delmer Schlenker, Marty Schmer, Eric Scholljejerdes, Don Tanaka, Cal Thorson, and Dawn Wetch. Chart design by Mark Liebig, Holly Johnson, and Jill Gunderson. The Cover Crop Chart was generated with input from producers and technicians in the Area IV Soil Conservation Districts of North Dakota and NRCS staff at the Bismarck and Dickinson Field/Area Offices.

Table adapted from Crop Sequence Calculator (v. 3.1). Software available for download at [www.mandan.ars.usda.gov](http://www.mandan.ars.usda.gov)
Barley
(*Hordeum vulgare* L.)

- Cool Season, grass
- Annual
- Upright plant architecture
- Low water use
- Good salinity tolerance
- Seeding depth: ¾ – 2 inches
- Crude protein: hay 10-15%, grain 11-15%
- Benefits from arbuscular mycorrhizal associations
- Self pollinator (wind)
- Rated ‘very good’ at scavenging nitrogen from the soil

*View table for known crop sequence effects*
Oat
(Avena sativa L.)

- Cool Season, grass
- Annual
- Upright plant architecture
- Medium water use
- Fair salinity tolerance
- Seeding depth: 1 – 2 inches
- Crude protein: hay 9-15%, grain 13-18%
- Forms arbuscular mycorrhizal associations
- Self pollinator (wind)
- Rated ‘very good’ at scavenging nitrogen from the soil
Wheat
(*Triticum aestivum* L.)

- Cool season, grass
- Annual
- Upright plant architecture
- Includes spring and winter wheat varieties
- Medium water use
- Good to fair salinity tolerance
- Seeding depth: ½ – 1 ½ inches
- Crude protein: straw 4-10%, grain 12-16%
- C:N ratio: leaf 15-29, stem 31-65, root 24-74, straw 80-95 [end of season]
- Benefits from arbuscular mycorrhizal associations
- Self pollinator (wind)
- Rated ‘very good’ at scavenging nitrogen from the soil

*View table for known crop sequence effects*
Cereal rye  
(*Secale cereale* L.)

- Cool Season, grass  
- Annual  
- Upright plant architecture  
- High water use  
- Good salinity tolerance  
- Seeding depth: ¼ – 2 inches  
- Crude protein: straw 4%, grain 14%  
- C:N ratio: 40 – 48  
- Forms arbuscular mycorrhizal associations  
- Self pollinator (wind)  
- Rated ‘very good’ at scavenging nitrogen from the soil
Triticale

*(Triticale hexaploide Lart.; Triticosecale rimpauwi Wittm.)*

- Cool Season, grass
- Annual
- Upright plant architecture
- Fall and spring types available
- High water use
- Good salinity tolerance
- Seeding depth: 1 1/2 – 2 inches
- Crude protein: hay 9-16%, grain 17%
- Forms arbuscular mycorrhizal associations
- Self pollinator (wind)
Annual fescue  
({\textit{Vulpia myuros} L.; \textit{Fetuca} sp.)

- Cool Season, grass
- Annual
- Upright plant architecture
- Alternate names: Rattail fescue, Foxtail fescue
- Low water use
- Poor salinity tolerance
- Seeding depth: $\frac{1}{4} - 1$ inch
- Crude protein: hay 8-10%
- Benefits from arbuscular mycorrhizal associations

Saline Tolerant Grasses

- Cool Season, grass
- Perennial
- Upright plant architecture
- Low to moderate water use
- Moderate to high salinity tolerance
- Seeding depth: \( \frac{1}{4} – 1 \) inch
- Crude Protein: 7 – 19%
- Forms arbuscular mycorrhizal associations
- Many species are available in this category; each varies slightly in plant characteristics

*See the next six slides for more detail*
RS Hybrid Wheatgrass

(*Elymus hoffmannii* K.B. Jensen & K.H. Asay)

- Cool season, grass
- Perennial
- Upright plant architecture
- Alternate name: Green wheatgrass
- Low water use
- Moderate to high salinity tolerance
- Seeding depth: ¼ – ½ inch
- Crude protein: 7 – 12%
- RS hybrid wheatgrass is a hybrid between quackgrass (*Elymus repens*) and bluebunch wheatgrass (*Pseudoroegneria spicata*)

No Photo Available

Back to Cover Crop Chart
Tall Wheatgrass
(*Thinopyrum ponticum* (Podp.))

- Cool season, grass
- Perennial (introduced)
- Upright plant architecture
- Alternate name: Rush wheatgrass
- Moderate water use
- Excellent salinity tolerance
- Seeding depth: ¼ – 1 inch
  *shallower for finer textured soils*
- Crude protein: 7 – 19%
  - vegetative >10%
  - late bloom 6%
  - fully mature 2-3%
Intermediate Wheatgrass

(Thinopyrum intermedium (Host) Barkworth & D.R. Dewey)

- Cool season, grass
- Perennial (introduced)
- Upright plant architecture
- Alternate name: Pubescent wheatgrass
- Low to moderate water use; drought tolerant
- Good salinity tolerance
- Seeding depth: ½ – 1 inch
- Crude protein: 8 – 17%*
  *Northern Plains: may fall below 4% at the end of the season
- Cross-pollinates.
- Spreads vegetatively; under ideal conditions, it can slowly spread into adjacent communities
- Persistence of stand is limited (typically < 5 yr)

Photo by Howard F. Schwartz, Colorado State University, www.Bugwood.org

Back to Cover Crop Chart
Slender Wheatgrass
(Elymus trachycaulus (Link) Gould ex Shinners)

- Cool season, grass
- Perennial, short-lived (native)
- Upright plant architecture
- Low water use; will not tolerate water-logged soils
- Good salinity tolerance
- Seeding depth: ¼ – ¾ inch
- Crude protein: 22 – 25% (Spring); less than 10% (fall)
- May form arbuscular mycorrhizal associations

Photo by Dave Powell, USDA Forest Service, www.Bugwood.org

Back to Cover Crop Chart
Russian Wildrye

(*Psathyrostachys junceus* (Fisch.) Nevski)

- Cool season, grass
- Perennial (introduced)
- Upright plant architecture
- Low water use
  - drought tolerant
  - does not tolerate flooding
- Good salinity tolerance
- Seeding depth: ¼ – ½ inch
  - Sensitive to seeding depth – too deep will inhibit seed germination
- Crude protein: 5 – 17 %
- Difficult to establish
Alkaligrass (Puccinellia sp. Parl.)

- Cool season, grass
- Perennial
- Upright plant architecture
- Nuttall’s alkaligrass, *Puccinellia nuttalliana* [Schult.] Hitch.
  - Native to semi-arid, North American zones
  - Introduced [Eurasia]
  - Highest salinity tolerance of this genus
- Low to moderate water use
  - Can survive arid areas as well as marsh, basin, or wetland zones
- Excellent salinity tolerance
- Seeding depth: ¼ - ½ inch

*This slide completes the review of saline tolerant grasses*
Canola
(Brassica napus)

- Cool Season, broadleaf
- Major types:
  - Annual (spring-type)
  - Biennial (winter-type)
- Upright and spreading plant architecture
- Alternate name: Rapeseed
- Medium water use
- Good salinity tolerance
- Seeding depth: ¼ – 1 inch
- Crude protein: hay 16%, grain 21%, silage 12%, pasture 17%
- C:N ratio: leaf 12-16, stem 21-37, root 24-43
- Does not form arbuscular mycorrhizal associations
- Rated ‘very good’ at scavenging nitrogen from the soil
- Flowers attract pollinator

View table for known crop sequence effects

Back to Cover Crop Chart

Cool Season Broadleaf
Mustard
*(Brassica sp. L.)*

- Cool Season, broadleaf
- Annual or perennial
- Upright and spreading plant architecture
- Major types: Indian, Oriental, brown, yellow
- Related to crambe
- Low water use
- Poor salinity tolerance
- Seeding depth: ¼ – ½ inch
- Crude protein: hay 10%, grain 24-35%
- C:N ratio: 10 – 30
- Does not form arbuscular mycorrhizal associations
- Rated ‘good’ at scavenging nitrogen from the soil
- Plants from the *Brassica* group have potential to release compounds or metabolic by-products that work as bio-toxins against bacteria, fungi, insects, nematodes, and weeds
- Flowers may attract pollinators

![Image: Mustard plant]

*View table for known crop sequence effects*

[Back to Cover Crop Chart](#)
Radish
(\textit{Raphanus sativus})

- Cool Season, broadleaf
- Annual
- Upright and spreading plant architecture
- Root crop
- Major types:
  - Oilseed (var. \textit{oleiformis})
  - Forage (var. \textit{niger}): Daikon
- High water use
- Poor salinity tolerance
- Seeding depth: \(\frac{1}{4} - \frac{1}{2}\) inch
- Crude protein: 26-30%
- C:N ratio: oilseed 19 – 20
- Does not form arbuscular mycorrhizal associations
- Rated ‘very good’ at scavenging nitrogen from the soil
- Flowers attract pollinators

\(\text{Back to Cover Crop Chart}\)
Turnip
(\textit{Brassica rapa L. var. rapa})

- Cool Season, broadleaf
- Biennial
- Upright and spreading plant architecture
- Root crop
- High water use
- Poor salinity tolerance
- Seeding depth: $\frac{1}{4} – \frac{1}{2}$ inch
- Crude protein: tops 16%, root 12-14%
- Closely related to rutabaga
- Does not form arbuscular mycorrhizal associations
- Rated ‘good’ at scavenging nitrogen from the soil
- Flowers attract pollinators

\textit{Back to Cover Crop Chart}
Beet
*(Beta vulgaris)*

- Cool Season, broadleaf
- Biennial
- Upright and spreading plant architecture
- Root crop
- High water use
- Variable salinity tolerance, depending on beet type
- Seeding depth: ½ - ¾ inch
- Crude protein: tops 12-15%, root 7-10%
- C:N ratio: tops 11 – 14
- Does not form arbuscular mycorrhizal associations
- Rated ‘good’ at scavenging nitrogen from the soil
- Self pollinator (wind)
- Multiple sub-species including garden beets and sugar beets
Carrot
(Daucus carota var. sativus L.)

- Cool Season, broadleaf
- Major types:
  - Biennial (cultivated)
  - Annual (wild)
- Upright and spreading plant architecture
- Root crop
- High water use
- Seeding depth: ⅛ - ¼ inch
- Crude protein: 10%
- Forms arbuscular mycorrhizal associations
- Plants may bolt and flower starting in second year of growth
- Flowers may attract pollinators

Photo by Howard F. Schwartz
Colorado State University, www.Bugwood.org

Back to Cover Crop Chart
Camelina
(Camelina sativa (L.) Crantz)

- Cool Season, broadleaf
- Annual, biennial
- Upright plant architecture
- Alternate names: False flax, gold-of-pleasure, linseed dodder, largeseed falseflax, leindotter, Siberian oilseed
- Low water use
- Fair salinity tolerance
- Seeding depth: ⅛ – ¼ inch
- Crude Protein: 46%
- C:N Ratio: stems 40-95; pods 25-70; seed 12-16
- Does not form arbuscular mycorrhizal associations
- Mainly a self pollinator but benefits genetically from exposure to high population of pollinators
- Sensitive to soil herbicide imidazolinones and sulfentrazone
- Volunteer plants can become problematic
- Potentially allelopathic for flax
Phacelia
*(Phacelia tanacetifolia* Benth.)*

- Cool Season, broadleaf
- Annual
- Upright plant architecture
- Low water use
- Low salinity tolerance
- Seeding depth: $\frac{1}{8} - \frac{1}{4}$ inch
- C:N ratio: 10 – 15
- Forms arbuscular mycorrhizal associations
- Attracts beneficial insects

[Image of Phacelia plants]

USDA-NRCS, Bismarck Plant Materials Center

[Back to Cover Crop Chart]
Flax
*(Linum usitatissimum L.)*

- Cool Season, broadleaf
- Annual
- Upright plant architecture
- Medium water use
- Fair salinity tolerance
- Seeding depth: ½ – 1 ½ inch
- Benefits from arbuscular mycorrhizal associations
- Flowers attract pollinators
Kale

_(Brassica napus L. var. pabularia)_

- Cool Season, broadleaf
- Annual
- Upright and spreading plant architecture
- Major types:
  - Siberian
  - Russian
- Medium water use
- Fair salinity tolerance
- Seeding depth: ¼ – ½ inch
- Crude protein: ≈30%
- C:N ratio: 10 – 30
- Does not form arbuscular mycorrhizal associations

Photo by Rasbak, Wikimedia.com
Spinach
(Spinacia oleracea L.)

- Cool Season, broadleaf
- Annual
- Upright and spreading plant architecture
- Low to medium water use
- Poor salinity tolerance
- Seeding depth: ¼ – ½ inch
- Crude protein: ≈20%
- C:N ratio: 6 – 8
- Sensitive to acid soils
- Does not form arbuscular mycorrhizal associations
Chard
(Beta vulgaris L. ssp. cicla (L.) W.D.J. Koch)

- Cool season, broadleaf
- Annual, Biennial
- Upright spreading plant architecture
- Alternate names: Swiss chard, silverbeet, perpetual spinach, spinach beet, crab beet, bright lights, seakale beet, and mangold
- High water use
- Poor salinity tolerance
- Seeding depth: ½ - 1 inch
- Crude Protein: 32%
- Does not form arbuscular mycorrhizal associations
- Self pollinator (wind)
Field pea

(Pisum sativum arvense L.)

• Cool Season, broadleaf
• Annual
• Legume (N fixation)
• Upright plant architecture (vine)
• Low water use
• Poor salinity tolerance
• Seeding depth: 1 – 3 inches
• Crude protein: hay 14%, grain 24%, silage 15%
• C:N ratio: leaf 13-25, stem 27-83, root 17-27
• Forms arbuscular mycorrhizal associations
• Flowers attract pollinators

View table for known crop sequence effects
Lentil
(Lens culinaris Medik.)

- Cool Season, broadleaf
- Annual
- Legume (N-fixation)
- Upright and spreading plant architecture
- Low water use
- Poor salinity tolerance
- Seeding depth: 1 – 1 ½ inch
- Crude protein: hay 14%, grain 28%, silage 15%
- C:N ratio: leaf 11-21, stem 25-49, root 22-30
- Forms arbuscular mycorrhizal associations
- Self-pollinated but flowers may attract pollinators

View table for known crop sequence effects
Lupin
(Lupinus sp. L.)

- Cool Season, broadleaf
- Annual
- Legume (N-fixation)
- Upright plant architecture
- Examples include blue, narrow-leaved, European yellow, white, Spanish, etc.
- Low water use
- Prefers acid soils
- Seeding depth: 1 – 2 inches
- Crude protein: silage 15%
- C:N ratio: leaf 12-30, stem 25-49
- Does not form arbuscular mycorrhizal associations
- Flowers attract pollinators
Medic
(Medicago spp.)

- Cool Season, broadleaf
- Annual or perennial
- Legume (N-fixation)
- Upright and spreading plant architecture
- Over 35 known medic species exist. Common examples include barrel, black, & burr.
- Low water use
- Poor to fair salinity tolerance
- Seeding depth: ¼ inch
- Crude protein: black medic 19-21%
- Forms arbuscular mycorrhizal associations
- Attracts pollinators

BLACK MEDIC
Photo by Mike Plumer
www.mccc.msu.edu

BURR MEDIC
Photos by Bob Bugg
www.sarep.ucdavis.edu/database/covercrops

❖ Back to Cover Crop Chart
Roundhead Lespedeza

(Lespedeza capitata (Michx.))

- Cool Season, broadleaf
- Perennial
- Legume (N-fixation)
- Upright plant architecture
- Alternate names: Roundhead bush clover, bushclover, rabbit foot
- Low salinity tolerance
- Seeding depth: ¼ - ½ inch
- C:N ratio: ≈ 23
- Crude Protein: 11%
- Forms arbuscular mycorrhizal associations

Photos by Chris Evans

Back to Cover Crop Chart
Berseem Clover
(*Trifolium alexandrinum* L.)

- Cool Season, broadleaf
- Annual
- Legume (N-fixation)
- Upright plant architecture
- Alternate name: Egyptian clover
- Low water use
- Fair salinity tolerance
- Seeding depth: ¼ – 1 inch
- Crude protein: 27-29%
- C:N ratio: 18 – 23
- Forms arbuscular mycorrhizal associations
- Flowers attract pollinators
Crimson Clover
(Trifolium incarnatum L.)

- Cool season, broadleaf
- Annual
- Legume (N-fixation)
- Upright and spreading plant architecture
- Medium water use
- Poor salinity tolerance
- Seeding depth: ¼ - ½ inch
- Crude protein: 18%
- C:N ratio: 16 - 19
- Forms arbuscular mycorrhizal associations
- Flowers attract pollinators

[Images of Crimson Clover]
Red Clover
*(Trifolium pratense L.)*

- Cool Season, broadleaf
- Biennial; short-lived perennial
- Legume (N-fixation)
- Upright plant architecture
- Two types:
  - medium, perennial or biennial; (2-3 cuts per season)
  - mammoth (1 cut per season)
- Medium water use
- Poor salinity tolerance
- Seeding depth: ¼ – ½ inch
- Crude protein: 15%
- C:N ratio: 15 – 23
- Forms arbuscular mycorrhizal associations
- Flowers attract pollinators

*Photo by Jeremy Singer*

*Photo by Jeremy Singer*  
www.mccc.msu.edu
White Clover 
*(Trifolium repens L.)*

- Cool Season, broadleaf
- Perennial
- Legume (N-fixation)
- Upright and spreading or prostrate plant architecture
- 3 Types grouped by size:
  1. **Large**: tallest of the white clovers, upright architecture, high forage quality but less durable [var. Ladino]
  2. **Intermediate**: most common white clover, flowers earlier, and has a higher heat tolerance, upright architecture [var. Dutch white, New Zealand White]
  3. **Small**: lowest growing type, prostrate; survives grazing [var. Wild White]
- Medium water use
- Poor salinity tolerance
- Seeding depth: ¼ inch
- Crude protein: 24 – 30%
- C:N ratio: 13 – 23
- Forms arbuscular mycorrhizal associations
- Flowers attract pollinators
- Aggressive growth in some regions or habitats; may displace desirable vegetation if not properly managed

[Back to Cover Crop Chart](#)
Kura Clover

(*Trifolium ambiguum* M. Bieb.)

- Cool season, broadleaf
- Perennial
- Legume (N-fixation)
- Prostrate plant architecture
- Also called Caucasian, honey, and pellet clover
- Moderate water use
- Poor salinity tolerance
- Seeding depth: ¼ – ½ inch
- Crude protein: 23 – 25%
- Forms arbuscular mycorrhizal association
- Flowers attract pollinators
Vetch
\( (Vicia \text{ sp.}) \)

- Cool Season, broadleaf
- Annual or biennial
- Legume (N-fixation)
- Prostrate plant architecture (vine)
- Common examples include hairy, purple, and smooth vetch
- Low to medium water use
- Poor salinity tolerance
- Seeding depth: 1 ½ – 2 ½ inches
- Crude protein: 13-20%
- C:N ratio: 10 – 19
- Forms arbuscular mycorrhizal associations
- Attracts pollinators

\[ \text{Back to Cover Crop Chart} \]
Birdsfoot trefoil
(*Lotus corniculatus* L.)

- Cool Season, broadleaf
- Perennial, short lived
- Legume (N-fixation)
- Prostrate plant architecture
- Low to medium water use
- Fair salinity tolerance
- Seeding depth: ¼ – ½ inch
- Crude protein: hay 16 - 22%
- Forms arbuscular mycorrhizal associations
- Attracts pollinators

*Photo by Bob Bugg*

[Back to Cover Crop Chart](#)
Sweetclover
*(Melilotus sp. L)*

- Cool Season, broadleaf
- Annual or biennial
- Legume (N-fixation)
- Two types
  - yellow *Melilotus officinalis* L.
  - white *Melilotus alba* L.
- Upright plant architecture
- Moderate water use
- Fair salinity tolerance
- Seeding depth: ½ inch
- Crude protein: 11-18%
- C:N ratio: 12 – 23
- Forms arbuscular mycorrhizal associations
- Attracts pollinators

*Back to Cover Crop Chart*
Sainfoin
(Onobrychis viciifolia Scop.)

- Cool Season, broadleaf
- Perennial
- Legume (N-fixation)
- Upright plant architecture
- Medium to high water use
- Fair to poor salinity tolerance
- Seeding depth: ¼ – ¾ inch
- Crude protein: 13-20%
- Forms arbuscular mycorrhizal associations
- Attracts pollinators
Alfalfa
(Medicago sativa L.)

- Cool Season, broadleaf
- Perennial
- Legume (N-fixation)
- Upright plant architecture
- High water use
- Poor salinity tolerance
- Seeding depth: ¼ – ½ inch
- Crude protein: 14-22%
- C:N ratio: 11 – 13
- Non-dormant cultivars can perform like an annual
- Forms arbuscular mycorrhizal associations
- Good at scavenging nitrogen from the soil
- Attracts pollinators

Chickpea
(Cicer arietinum L.)

- Cool Season, broadleaf
- Annual
- Legume (N-fixation)
- Two types
  - Desi
  - Kabuli
- Upright and spreading plant architecture
- Alternate name: garbanzo bean
- Low water use
- Poor salinity tolerance
- Seeding depth: 1 ½ – 2 inches
- Crude protein: straw 6%, grain 22%
- C:N ratio: leaf 10-15, stem 26-56, root 16-27
- Forms arbuscular mycorrhizal associations
- Flowers attract pollinators

*View table for known crop sequence effects*
Fava Bean
(*Vicia faba* L.)

- Cool season, broadleaf
- Annual
- Legume (N-fixation)
- Upright plant architecture (vine)
- Alternate names: Bell bean, horse bean
- Medium water use; poor drought tolerance
- Moderate salinity tolerance (depending on variety)
- Seeding depth: 2-4 inches
- Crude protein: 17%
- Forms arbuscular mycorrhizal associations
- Flowers attract pollinators
Cowpea  
(*Vigna unguiculata* L.)

- Warm Season, broadleaf
- Annual
- Legume (N-fixation)
- Upright and spreading plant architecture (vine)
- Alternate names: Southern pea, black-eye pea
- Low water use
- Fair salinity tolerance
- Seeding depth: ¾ – 1 inch
- Crude protein:
  - grain and leaves 19-30%
  - stems 13-17%
- C:N ratio: 18 – 22
- Forms arbuscular mycorrhizal associations
- Attracts pollinators

Photo by Howard F. Schwartz  
Colorado State University, www.Bugwood.org

[Back to Cover Crop Chart]
Fenugreek
(Trigonella sp. L.)

- Warm Season, broadleaf
- Annual/Perennial
- Legume (N-fixation)
- Two types:
  - cultivated \([T. \text{ corniculata}]\);
  - forage or sickle fruit \([T. \text{ foenum-graecum}]\)
- Upright plant architecture
- Alternate name: Greek hay
- Low water use
- Poor salinity tolerance
- Seeding depth: 1 – 2 inches
- Crude protein: 16 – 25%
- Forms arbuscular mycorrhizal associations
- Self pollinator (wind)
- Used as a forage, spice, and for health benefits*
  *contains nutraceuticals:
    1. steroidal sapogenin
    2. galactomannan
    3. isoleucine

Pigeonpea
*(Cajanus cajan (L.) Millsp.)*

- Warm season, broadleaf
- Perennial
- Legume (N-fixation)
- Upright and spreading plant architecture
- Alternate names: Angola pea, Congo pea, dhal, no-eye pea, gungo pea, and red gram
- Low water use
- Moderate to high salinity tolerance
- Seeding depth: 1 ½ inch
- Crude protein: 28-36%
- C:N ratio: 20
- Forms arbuscular mycorrhizal associations
- Mostly self-pollinated

![Warm Season Legume](https://www.prota4u.org)
Cluster bean
(Cyamopsis tetragonoloba L. Taub)

- Warm Season, broadleaf
- Annual
- Legume (N-fixation)
- Upright and spreading plant architecture
- Alternate names: Guar, guar bean, c
- Low water use
- Good salinity tolerance
- Seeding depth: 1 – 1 ½ inch
- Crude protein:
  - Straw 7 – 10%
- C:N ratio: 65 (residue)
- Forms arbuscular mycorrhizal associations
- Self-pollinated
- Can be used as a green manure or forage
- Plant extract (gum) has industrial uses

Back to Cover Crop Chart
Sunnhemp

(Crotalaria juncea L.)

- Warm season, broadleaf
- Annual
- Legume (N-fixation)
- Upright plant architecture
- Low to moderate water use
- Poor salinity tolerance
- Seeding depth: ½” – 2 ½” inches
- ‘Good’ N-fixation capacity
- Forms arbuscular mycorrhizal associations
- Self pollinates (wind) as well as cross-pollinates (insects/birds)
- Rated ‘Excellent’ at controlling soil nematodes
- Used as a green manure, forage*, or fiber crop
- Certain cultivars contain alkaloids which are poisonous to livestock; check before feeding to animals
Mung bean
(Vigna radiata L.)

- Warm Season, broadleaf
- Annual
- Legume (N-fixation)
- Upright and spreading plant architecture
- Low to medium water use
- Poor salinity tolerance
- Seeding depth: 1 ½ – 3 inches
- Crude protein: 16-23%
- C:N ratio: 10 – 15
- Forms arbuscular mycorrhizal associations
- Self-pollinated
Soybean
(Glycine max (L.) Merr.)

- Warm Season, broadleaf
- Annual
- Legume (N-fixation)
- Upright and spreading plant architecture
- Medium water use
- Poor salinity tolerance
- Seeding depth: 1 – 2 inches
- Crude protein: hay 17%, grain 42%
- C:N ratio: leaf 14, stem 39, root 34
- Forms arbuscular mycorrhizal associations
- Self-pollinated but flowers may attract pollinators

View table for known crop sequence effects

Peanut
(Annual - *Arachis hypogaea* L.; Perennial – *Arachis glabrata* L.)

- Warm season, broadleaf
- Annual, Perennial
- Legume (N-fixation)
- Upright and spreading (annual) or prostrate (perennial) plant architecture
- Alternate name: Groundnut
- High water use
- Poor salinity tolerance
- Seeding depth: 1 – 4 inches
  
  *Perennial peanuts are planted using rhizomes only*
- Crude Protein: 13 – 20%
- Forms arbuscular mycorrhizal associations
- Mainly self-pollinate (wind); small % cross-pollinate
- Rated ‘Efficient’ at scavenging P & K from soil
- Perennial varieties used as cattle forage

*Back to Cover Crop Chart*
Amaranth
(Amaranthus sp.)

- Warm Season, broadleaf
- Annual
- Upright plant architecture
- Over 50 species; some exhibiting glyphosate resistance
- Low water use
- Tolerant of heat and drought
- Seeding depth: ½ – 2 inches
- Crude protein: ≈14%
- Does not form arbuscular mycorrhizal associations
- Self-pollinated (wind)
- Flowers may attract pollinators

Buckwheat

(Fagopyrum esculentum Moench; Fagopyrum sagittatum Gilib)

- Cool Season, broadleaf
- Warm season growth characteristics
- Annual
- Upright plant architecture
- Medium water use
- Poor salinity tolerance
- Enhances soil P availability
- Seeding depth: ½ inch
- Crude protein: straw 5%, grain 13%
- C:N ratio: leaf 8-10, stem 12-32, root 28-47
- Does not form arbuscular mycorrhizal associations
- Attracts pollinators

View table for known crop sequence effects

[Back to Cover Crop Chart]
Quinoa

(*Chenopodium quinoa* Willd.)

- Warm season, broadleaf
- Annual
- Upright plant architecture
- Moderate water use
- Good salinity tolerance
- Seeding depth: ½ - 1 inch
- Crude protein: 14%
- C:N ratio: 14-25
- Does not form arbuscular mycorrhizal associations
- Self pollinates (wind); up to 15% may cross-pollinate
- Not susceptible to cereal diseases; slightly vulnerable to soil nematodes
- No registered herbicides for quinoa at this time
Chicory  
(*Cichorium intybus* L.)

- Warm Season, broadleaf
- Perennial
- Upright and spreading plant architecture (vine)
- Alternate names: French endive, succory
- Medium water use
- Seeding depth: $\frac{1}{8} - \frac{1}{2}$ inch
- Crude protein: 10-32%
- Forms arbuscular mycorrhizal associations
- Attracts pollinators
- Rated ‘very good’ at scavenging nitrogen from the soil
- Highly invasive

*Back to Cover Crop Chart*
Cucurbita sp.
Family

- This is a broad grouping including squash, gourd, cucumber, melon, and pumpkin
- Warm Season, broadleaf
- Annual
- Prostrate plant architecture (vine)
- Seeding depth: $\frac{1}{2} - 1$ inch
- Forms arbuscular mycorrhizal associations
- Attracts pollinators
- Can be used for weed suppression as a ‘smother crop’

Safflower
*(Carthamus tinctorius L.)*

- Warm Season, broadleaf
- Annual
- Upright plant architecture
- High water use
- Good salinity tolerance
- Deep rooted
- Effective at ‘mining’ mobile nutrients deep in the soil profile
- Seeding depth: 1 – 1 ½ inch
- Crude protein: hay 10-13%, grain 18%
- C:N ratio: leaf 21, stem 56, root 73
- Forms arbuscular mycorrhizal associations
- Flowers attract pollinators

◊ *View table for known crop sequence effects*
Sunflower  
*(Helianthus annuus L.)*

- C3 plant with warm season growth characteristics, broadleaf
- Annual
- Upright plant architecture
- High water use
- Fair salinity tolerance
- Deep rooted
- Effective at ‘mining’ mobile nutrients deep in the soil profile
- Seeding depth: 1 – 3 ½ inches
- Crude protein: silage 11-12%, grain 20-28%
- C:N ratio: leaf 11-14, stem 41-46, root 50-68, flower 14-19
- Forms arbuscular mycorrhizal associations
- Flowers attract pollinators

*View table for known crop sequence effects*
Foxtail Millet
(*Setaria italica* L.)

- Warm Season, grass
- Annual
- Upright plant architecture
- Low water use
- Poor salinity tolerance
- Seeding depth: 1 inch
- Crude protein: hay 15%
- Forms arbuscular mycorrhizal associations
- Self pollinator (wind)

Photo by Howard F. Schwartz
Colorado State University, [www.Bugwood.org](http://www.Bugwood.org)

[Back to Cover Crop Chart](#)
Pearl Millet  
(*Pennisetum glaucum* L.)

- Warm Season, grass
- Annual
- Upright plant architecture
- Low water use
- Poor salinity tolerance
- Seeding depth: ½ – 1 inch
- Crude protein: hay 13%
- Forms arbuscular mycorrhizal associations
- Self pollinator (wind)

**View table for known crop sequence effects**
Proso Millet  
\textit{(\textit{Panicum milaceum} L.)}  

- Warm Season, grass  
- Annual  
- Upright plant architecture  
- Medium water use  
- Poor salinity tolerance  
- Seeding depth: 1 inch  
- Crude protein: hay 10%  
- C:N ratio: leaf 12-16, stem 12-35, root 17-26  
- Forms arbuscular mycorrhizal associations  
- Self pollinator (wind)  

\textbf{View table for known crop sequence effects}
Grain Sorghum  
(*Sorghum bicolor* L. Moench)

- Warm Season, grass
- Annual
- Upright plant architecture
- Alternate name: Sorghum-sudan grass
  *Grain sorghum and sudan grass were formerly separate species that have been combined. They are separated in the chart due to different plant attributes.*
- Medium water use
- Fair salinity tolerance
- Seeding depth: 1 – 2 inches
- Crude protein: hay 7%, stover 5%, grain 10%
- C:N ratio: leaf 11-17, stem 10-27, root 22-30
- Forms arbuscular mycorrhizal associations
- Self pollinator (wind)
- Stress conditions that limit growth (e.g., drought, frost) can contribute to prussic acid accumulation in leaves

Sudan grass
(Sorghum bicolor L. Moench)

- Warm Season, grass
- Annual
- Upright plant architecture
- Alternate name: Sorghum-sudan grass

*Grain sorghum and sudan grass were formerly separate species that have been combined. They are separated in the chart due to different plant attributes.

- Medium water use
- Fair salinity tolerance
- Seeding depth: 1 inch
- Crude protein: hay 7-11%, silage 6-17%
- C:N ratio: 48 - 63
- Forms arbuscular mycorrhizal associations
- Rated ‘Excellent’ at nutrient scavenging
- Self pollinator (wind)
- Stress conditions that limit growth (e.g., drought, frost) can contribute to prussic acid accumulation in leaves
- Known alleopathic effects on annual ryegrass

Photo by Howard F. Schwartz
Colorado State University, www.Bugwood.org

Back to Cover Crop Chart
Teff
*(Eragrostis tef (Zuccagni) Trotter)*

- Warm Season, grass
- Annual
- Upright plant architecture
- Medium water use
- Poor salinity tolerance
- Seeding depth: ½ inch
- Crude protein: 10-18%
- Forms arbuscular mycorrhizal associations
- Self pollinator (wind)
Corn  
(Zea mays L.)

- Warm Season, grass
- Annual
- Upright plant architecture
- High water use
- Poor salinity tolerance
- Seeding depth: 1 – 2 inches
- Crude protein: grain 9-10%, stover 5%, silage 8-11%
- C:N ratio: stalk 11-65, leaf 13-20, root 20-49
- Forms arbuscular mycorrhizal associations
- Self pollinator (wind)
