

Become a Volunteer Stream Monitor

Volunteer stream monitors play a key role in stream stewardship by raising awareness of pollution problems and providing water quality data the community can use to protect local streams.

- Learn how to collect and record water quality data on streams
- Help Pierce Conservation District monitor one of many streams throughout Pierce County
- Watch our streams for changes that threaten natural stream function
- Make a difference in your environment and community

If you are interested in becoming a stream monitor contact Belinda Paterno at (253) 845-9770 x109 or belindap@pierced.org.
