

## Equity Focal Area for Green Stormwater Mini-Grants

As part of PCD's commitment to becoming a more equitable and anti-racist organization, we recognize that historical and institutional inequities resulted in the denial of resources and support to systemically marginalized communities. These inequities manifest in many ways, including geographically. The Equity Focal Area was created in an attempt to purposefully support neighborhoods and communities that have historically and continue to face inequitable access to resources. The focal area encompasses neighborhoods that were previously red-lined, face disproportionate health disparities, and have relatively little green space.
